Girls explore careers at Teentech 2016

About 65 girls from seven high schools in Atlantic and Cape May counties participated in Teentech 2016, a daylong program sponsored by the Atlantic and Cape May County chapters of the American Association of University Women, a national organization whose primary mission is education for women and girls. The program at Atlantic Cape Community College in Mays Landing was designed for girls interested in STEM-related careers in science, technology, engineering and math. The hands-on workshops included crime-scene investigation, TV production, drones, 3D printing, engineering, the science of cooking and medical training. John Heenan, above, one of the guest speakers, shows students how to make a plaster cast of a tire print and a footprint in a CSI-style workshop.
